Sue Biggins and her colleagues were the first to isolate kinetochores, the structure that attaches centromeres of mitotic chromosomes to the microtubules of the mitotic spindle. This breakthrough has enabled her lab and collaborators to characterize kinetochore proteins and the physical mechanisms of mitosis.

Thursday, April 11, 2019
Bass Center 305
266 Whitney Ave., New Haven
3:45pm Tea    4:00pm Seminar
Hosted by: Tom Pollard
