

MCDB 474

Independent Research for Underclassmen & Non-Majors: taken as PASS/FAIL

Summary: MCDB 474 is a one-credit research course taken in an authorized laboratory of a Yale University faculty member engaged in research that falls within the disciplines of Molecular, Cellular and Developmental Biology. Students are encouraged to pursue research in the laboratory of a faculty member within the Department of MCDB, or they may pursue a scientific problem in other departments (including at YSM) as long as the research meets certain criteria (described below), or with permission from the course instructors.

MCDB 474 is a one term course than can be taken more than once and is designed specifically for non-seniors. Students are expected to read and sign the contract, as well as present and obtain a signed mentor's agreement (see below) by the end of the add/drop period each term. Students are also expected to meet with their faculty principal investigator and if possible, their lab mentor (the person who helps you in day-to-day benchwork), prior to the end of the add/drop period to write a 1-2 page double-spaced, research proposal. The research proposal is due February 4 and must be uploaded to the MCDB 474 Assignments section of Canvas by 5 PM on the last day of add/drop.

A final written report that summarizes your research effort (12-15 pages double spaced) is required to be uploaded to MCDB 474 Canvas Assignments by 5 pm on the last day of classes. The 15-page limit is firm and includes: all data, appendices and references. The title page does not count toward the 15-page limit.

Students who successfully complete MCDB 474 receive a P "Pass" on their transcript. No grades are issued. MCDB 474 is one Yale College credit.

MCDB 474 can not be used as a substitute to fulfill the laboratory course research requirements (MCDB 201Lb – MCDB 345Lb) necessary to complete the BA or BS degrees in the MCDB major. MCDB 474 does not fulfill the Senior Requirement for the MCDB BA or BS degrees, nor can it be used as a core requirement for the MCDB major.

All students engaged in MCDB research for Yale College credit must sign and agree to a contract that stipulates the threshold expectations for completion of this one credit course.

MCDB 474 Student Contract

As a student conducting independent research for Yale College course credit in MCDB 474, I agree to the following:

- 1) My research project will involve on average 12 hours/week of experimentation and analysis in the laboratory setting, with no less than 10 hours per week at any point during the semester when classes are in session. In rare instances where students may not be able to meet the minimal time commitments on a weekly basis, they must make arrangements with their laboratory mentor and laboratory principal investigator (PI) to make-up lost research time prior to the end of the term.
- 2) I acknowledge that failure to be present in the laboratory for the minimal time requirement may result in being removed from MCDB 474 based on the recommendation of the research principal investigator who heads the laboratory, or at the discretion of the MCDB 474 faculty course instructors.
- 3) I will make every effort to attend all of my research PI's laboratory meetings and also present my research to my labmates at least once each term that I'm enrolled in MCDB 474.

Name of student: _____

Signature: _____ Email address:

College and class: _____ Major: _____

Mobile #: _____

Name of PI (Faculty who heads the laboratory of your research):

Department and email of PI:

Name and title of research mentor if different from PI. This is the person who will work with you at the lab bench on a regular basis. This could be a postdoctoral fellow, a graduate student or a lab manager:

Name: _____ Title: _____

MCDB 474 Research Mentor Contract:

One of the requirements for accepting undergraduates into your laboratory for course credit in MCDB 474 research is that you agree to the following:

I acknowledge that each MCDB 474 student engaged in research under my supervision will be present in the laboratory and engaged in the assigned project for 10-12 hours per week on average for the entire term that classes are in session. If this is not the case, by mid semester of the term I will notify the student and the MCDB 474 coordinators that an increase in effort is expected. I am aware that failure to meet this expectation will result in the student's withdrawal from the course. I expect all MCDB 474 students working in my laboratory to attend our laboratory meetings and present their research at least once each term.

Student: _____

Research Mentor: _____

Signature of Research Mentor: _____

Mentor's Department: _____

Email Address: _____

Mobile #: _____

It is the responsibility of the undergraduate student to obtain the required signatures and upload this form to the MCDB 474 Canvas Assignment section.

If you have questions, contact andrea.chamba@yale.edu

Due dates:

Student and Mentor Contract and a 1 Page Research Proposal:

Fall: FRIDAY, SEPTEMBER 9, 2022 @ 5:00 PM

Spring: TUESDAY, JANUARY 24, 2023 @ 5:00 PM

Final Report Due:

Fall: FRIDAY, DECEMBER 9, 2022 @ 5:00 PM

Spring: FRIDAY, APRIL 28, 2023 @ 5:00 PM

MCDB 474 – Independent Research (Detailed Information)
For Underclassmen & Non-Majors taken as PASS / FAIL

Course Overview: The main purpose of this course is to enable you to obtain hands-on experience with basic research as part of your education at Yale. The course entails one semester of experimental work (the minimum time expectation is 10-12 hr/week in the lab) aimed at generating data using experimental strategies designed to address a specific research problem. The course also requires a final written summary in the format of a research paper.

Submission and Formatting Instructions for All Written Work: All papers should be uploaded to the Assignment section in Canvas by the deadlines stated. For your research proposal due February 4, you present a 1–2-page paper that you write with guidance and input from your PI and/or mentor that outlines 1-3 specific aims, your research methods, intended goals and a succinct literature reference list (5-8 references). This is essentially what you are proposing to do during your term of research. List your goals and how you will pursue these in the lab. The primary goal of this proposal is to provide evidence to the MCDB 474 course instructors that you have met with a principal investigator who heads a lab at Yale and discussed a tractable research project with realistic specific aims that fall within the disciplines of molecular, cellular and development biology research. The title page does not count toward the 2-page limit.

For your final research summary paper due April 29, you submit a 12–15-page research paper (double spaced: 15-page limit maximum, font 12) that summarizes all you have accomplished using a typical journal paper format: 1) Title, 2) Abstract, 3) materials and methods, 4) results, 5) discussion of data and 6) succinct reference list.

The preferred format style is detailed in the following paper: *How to Write your First Research Paper*. Elena D. Kallestinova. *Yale Journal of Biology and Medicine* 84 (2011), pp 181-190. Yale Graduate School, Graduate Writing Center.

[https://poorvucenter.yale.edu/sites/default/files/files/how to write your first research paper 2011.pdf](https://poorvucenter.yale.edu/sites/default/files/files/how%20to%20write%20your%20first%20research%20paper%202011.pdf)

If you would like more detailed information, please read some of the guidelines outlined by the *Journal of Cell Biology*.

[https://poorvucenter.yale.edu/sites/default/files/files/how to write your first research paper 2011.pdf](https://poorvucenter.yale.edu/sites/default/files/files/how%20to%20write%20your%20first%20research%20paper%202011.pdf)

For both your proposal (due February 4) and final summary papers (due April 29), be sure to include a title page with the following information: (a) Title of Research, (b) Student Name, (c) PI name and names of other laboratory mentors who will provide you with training (other than PI), (e) Course & Term. Make sure to include a header on pages 2 through the end of the document with: (a) Student Name, (b) Course & Term and (c) Page Number.

Save papers as a pdf using the following nomenclature:

StudentLastName_FirstName_MCDBCourse_Term&Year.pdf. **Send a copy to your PI**

Safety Requirements: You will need to fulfill various safety requirements depending on your field of study. If you will be working with radioisotopes in a laboratory, you must have successfully completed a radiation safety training seminar at Yale. You will not be able to start your experiments unless this requirement is fulfilled. In addition, you should discuss with your supervisor whether you should take a chemical safety course. For further information on both these topics contact Environmental Health and Safety: <https://ehs.yale.edu/> Tel. 5-3550.

If your proposed research involves animal use, your professor **must** have an approval for this protocol from IACUC. Your professor must send a new form to IACUC to include you in the protocol once your project has been approved. Finally, if you have not already done so, you need to complete an IACUC course before research can begin.

Course Requirements:

Student and Research Mentor Contracts: Due dates: Fall: FRIDAY, SEPTEMBER 9, 2022 @ 5:00 PM; Spring: TUESDAY, JANUARY 24, 2023 @ 5:00 PM

These should be uploaded to the Assignments section of Canvas. Contracts are available on Canvas and the MCDB Website.

To be acceptable for MCDB research credit, the proposal must make clear the following criteria are met.

- 1) Students must be involved in the design of the proposed experiments.
- 2) Students must test at least one specific hypothesis.
- 3) The science must be of general relevance to topics covered in the Department of MCDB.

Research Proposal: Due dates: Fall: FRIDAY, SEPTEMBER 9, 2022 @ 5:00 PM; Spring: TUESDAY, JANUARY 24, 2023 @ 5:00 PM

Proposal: A 1–2-page double-spaced overview of your research plan. This proposal must be written with the guidance of you mentor and the PI of your laboratory. Topics include: ~1 page overview/background of the project (documented with a short bibliography), a section describing the general objectives, hypothesis to be tested and most importantly, the specific aims of your project. For guidance, ask your mentor to see a Specific Aims section of one of their NIH or NSF grants. The title page does not count toward the 2-page limit. However, the background, preliminary data, appendices and references must not exceed 2 pages.

Inappropriate Proposals that are unacceptable for MCDB research credit include lab work dedicated to analyzing data gathered by someone else or entering previously obtained data into a computer and running a statistical analysis program. Another example of an unsuitable proposal would be gathering data for another person to analyze. For example, taking medical histories or clinical measurements that will be passed on to someone else for study. Reading fMRIs and entering data are rarely acceptable. Projects involving allelic screening of patient populations for SNPs associated with a given disease are also not acceptable unless there is substantive experimental design/content. ***If you are considering a project that may fall into one of the categories above, please discuss this with the instructors in charge of***

MCDB 474 or the DUS of MCDB prior to committing to that laboratory or project (there may be suitable alternative projects in the same lab).

Time Commitment: We are particularly concerned that each student fulfills the minimum 10-12 hr/week research commitment in the lab; part of the Mentor's Contract is to verify that level of participation by mid-semester. ***If for any reason you are unable to fulfill your commitment to the course and laboratory, you will be asked to withdraw from the course.***

Final Report – Research Journal: Fall: FRIDAY, DECEMBER 9, 2022 @ 5:00 PM; Spring: FRIDAY, APRIL 28, 2023 @ 5:00 PM

A 12–15-page double-spaced report in the form of a typical **Research Journal** uploaded to the Assignment section in Canvas by the above dates. Well in advance of this deadline, you should meet with your research mentor to plan a general outline for your paper and engage them in continued discussions throughout the writing process. You should conform to any other specifics that your mentor might expect in your write-up. The research mentor should grade the final version of the report and return it to us with comments electronically along with a recommendation for an overall course grade. Your research mentor will be contacted directly with grading information near the end of the term.

The report should be written in a style similar to that of a paper in a typical **Research Journal** and should include the following sections:

- *Abstract:* This is a brief summary of the project and the results obtained.
- *Introduction:* What is the biological problem, why is it important, and what's known about it already?
- *Experimental Procedures* (Material and Methods).
- *Results:* Describe what you have done. Include bar graphs, sketches, diagrams, tables, photographs etc.
- *Discussion:* If your project was successful, describe the significance of the results. If your project did not work, describe what you think went wrong, and what your expectations were. Regardless of the outcome, describe what you would try next if you were to continue the project.
- *References:* References to previous work discussed as well as methods used should be cited as in any other research paper.

Grading: All students taking this course will receive **Pass/Fail**. Independent study courses earn Yale College credit for Underclassmen but are governed by the new “P/F with report” policy. A student who passes this course will have the mark of “P” entered on the Yale College transcript once the course instructor submits an independent study report form that describes the nature of the course and provides a detailed evaluation of the student's performance in it. Failures in the course will result in the recording of an “F”.
