

MCDB 475 – Senior Independent Research

FOR SENIOR REQUIREMENT

MCDB 475 Student Contract

As a student conducting independent research for Yale College course credit in MCDB 475, I agree to the following:

I am expected to devote, on average, 10-12 hr/week in the lab to this research. I am aware that failure to do so will result in my withdrawal from the course. I will make every effort to attend my research mentor's laboratory meetings and present my research at least once in my research mentor's lab. I will attend at least 2 of the MCDB Oral Presentation sessions and will present my research at one of them. I will make every effort to schedule my MCDB Oral Presentations at the time that fits with my mentor's schedule.

Name: _____

Signature: _____ Phone: _____ Class _____

Email Address: _____

Research Mentor: _____ Dept.: _____

Title for Research: _____

MCDB 475 Research Mentor Contract:

One of the provisions for agreeing to accept a student into your laboratory for course credit in MCDB 475 is that you agree to the following:

I will expect that each 475 student in my laboratory commit an average of 10-12 hours of effort per week in the lab. If this is not the case, by mid semester of the term I will notify the student and the MCDB 475 coordinator that an increase in effort is expected. I am aware that failure to meet this expectation will result in the student's withdrawal from the course. I expect 475 students in my laboratory to attend our laboratory meetings and present their research at least once in the lab. I will attend my student's MCDB Oral Presentation. If I am unable to attend, I will ask another member of my laboratory to attend.

Student: _____

Research Mentor: _____

Signature of Research Mentor: _____

Department: _____ Phone: _____

Email Address: _____

*It is the Student's responsibility to obtain the signatures and upload this form to the Canvas Assignment section.
If you have questions, please email crystal.adamchek@yale.edu*

Due dates: Student and Mentor Contract; 1 Page Summary:

Fall: MONDAY, SEPTEMBER 15, 2021 @ 5:00 PM
Spring: TBD, 2022 @ 5:00 PM

Final Report Due:

Fall: FRIDAY, DECEMBER 10, 2021 @ 5:00pm
Spring: TBD: 2022 @ 5:00pm

MCDB 475 – Senior Independent Research

Course Overview:

MCDB 475 is an independent research course designed to promote hands-on biological and biomedical investigation in the laboratory of a faculty member at Yale. The workload expectation is for students to be present and involved in laboratory research for 10-12 hours per week. Due to the inherent nature of independent laboratory research, students often spend considerably more than 12 hours per week in the lab to generate useful data. This course also requires a final written paper in the form of a Research Journal.

Safety Requirements:

Note that you will need to fulfill various safety and associated requirements to begin research, depending on your field of study. If you will be working with radioisotopes in a laboratory you must have attended a radiation safety training seminar at Yale! You will not be able to start your experiments unless this requirement is fulfilled. In addition, you should discuss with your supervisor whether you should take a chemical safety course. For further information on both these topics call the University Safety Dept. at Tel. 5-3550.

If your proposed research involves animal use your professor **must** have an approval for this protocol from IACUC. Your professor must send a new form to IACUC to include you in the protocol once your project has been approved. Finally, if you have not already done so, you need to complete an IACUC course before research can begin.

Course Requirements:

Student and Research Mentor Contracts: Due dates: Fall: **September 15, 2021 @5:00 pm**; Spring: **2022 TBD @ 5:00 PM**. These should be uploaded to the Assignment section of Canvas. Contracts and complete guidelines are available on Canvas and the MCDB Website.

Research Proposal: Due dates: Fall: **September 15, 2021 @ 5:00 pm**; Spring: **TBD @ 5:00 PM**. A 1-2 page double-spaced summary of your research (written in collaboration with your research mentor) is due at the beginning of the term. This should include ~ 1 page overview/background of the project (documented with a short bibliography) and a section describing the general objectives, hypothesis to be tested and most importantly, the specific aims of your project. For guidance, ask your mentor to see a Specific Aims section of one of their NIH or NSF grants. Please be sure to follow APA formatting – as well as follow the **Submission and Formatting Instructions for All Written Work**.

Inappropriate Proposals include simply analyzing data gathered by someone else, for example entering previously obtained data into a computer and running a statistical analysis program. An unsuitable proposal at the other extreme would be gathering data for another person to analyze, for example taking medical histories or clinical measurements that will be passed on to someone else for study. Projects involving allelic screening of patient populations for SNPs associated with a given disease are also not acceptable unless there is substantive experimental design/content. ***If you are considering a project that may fall into one of the categories above, please discuss this with the instructor in charge prior to committing to that laboratory or project (there may be suitable alternative projects in the same lab).***

Time Commitment:

We are particularly concerned that each student fulfills the minimum 10-12 hr/week research commitment in the lab; part of the Mentor's Contract is to verify that level of participation by mid-semester. If for any reason you are unable to fulfill your commitment to the course and laboratory, you will be asked to withdraw from the course. Note, if you are a senior planning on attending multiple interviews for medical school in the Fall, you are expected to make up for lost time.

Final Report – Research Journal: Due Date: Fall: December 10, 2021 @ 5:00pm; Spring: TBD 2022 @ 5:00pm.

A 12-15 page double-spaced report in the form of a typical Research Journal uploaded to the Assignment section in Canvas by the above dates. Well in advance of this deadline, you should meet with your research mentor to plan a general outline for your paper and engage them in continued discussions throughout the writing process. You should conform to any other specifics that your mentor might expect in your write-up. The research mentor should grade the final version of the report and return it to us with comments electronically along with a recommendation for an overall course grade. Your research mentor will be contacted directly with grading information near the end of the term.

The report should be written in a style similar to that of a paper in a typical **Research Journal** and should include the following sections:

- *Abstract:* This is a brief summary of the project and the results obtained.
- *Introduction:* What is the biological problem, why is it important, and what's known about it already?
- *Experimental Procedures* (Material and Methods).
- *Results:* Describe what you have done. Include bar graphs, sketches, diagrams, tables, photographs etc. – whatever is needed to represent your data.
- *Discussion:* If your project was successful, describe the significance of the results. If your project did not work, describe what you think went wrong, and what your expectations were. Regardless of the outcome, describe what you would try next if you were to continue the project.
- *References:* References to previous work discussed as well as methods used should be cited as in any other research paper.

Grading: All students taking this course for Senior Requirement will receive a letter grade and 1.0 Yale College credits.
